Table of Contents

| | |
|---------------------------------------------------------------------------|------------|
| Prologue | 7 |
| 1 Foreword | 1 |
| 2 Hype or hope? | 11 |
| 2.1 Blockchain as the dotcom bubble 2.0? | 11 |
| 2.2 The ten greatest blockchain myths | 17 |
| 3 How does the blockchain work? | 25 |
| 3.1 The blockchain as a distributed system | 26 |
| 3.1.1 Exchange of Transactions | 33 |
| 3.1.2 Block formation | 37 |
| 3.1.3 Trustlessness | 43 |
| 3.1.4 Who will form the next block? | 44 |
| 3.1.5 Soft forks: The chain at a crossroads | 49 |
| 3.1.6 Finder's fee for new blocks | 51 |
| 3.1.7 Proof of Work, Proof of Stake, Proof of Authority | 54 |
| 3.1.8 Content of the Blockchain | 59 |
| 3.2 Smart contracts | 63 |
| 3.2.1 Ethereum as the smart contract carrier | 65 |
| 3.2.2 Ethereum tokens | 69 |
| 3.2.3 Code is law | 71 |
| 3.2.4 Dapps – Distributed Applications | 73 |
| 3.2.5 Restrictions of the Ethereum blockchain | 78 |
| 3.2.6 Cryptofinancing and the tokenization of business | 87 |
| 3.3 Further blockchain technologies | 97 |
| 3.3.1 Tendermint | 98 |
| 3.3.2 Hyperledger | 109 |
| 3.3.3 BigchainDB | 116 |
| 3.3.4 IOTA – blockchain without a chain and without blocks | 118 |
| 3.3.5 Hedera Hashgraph | 125 |
| 3.4 What does the Blockchain of the future still need? | 126 |
| 3.5 Standardization of Blockchain Technology | 142 |
| 3.6 Select the blockchain technology that is suitable for the application | 148 |
| 3.7 Summary and Definition: What makes up a blockchain? | 153 |
| 4 Potential of the blockchain in the energy sector | 158 |
| 4.1 Energy trading and energy transmission in the past | 158 |
| 4.2 Current and Future Developments in the Electricity Market | 167 |
| 4.3 Usage of the blockchain in energy trading | 173 |
| 4.3.1 Status Quo 2018: Blockchain and Energy | 174 |
| 4.3.2 Scenario 2022: Evolutionary application of the blockchain | 175 |
| 4.4 Scenario 2030: A perfect energy market? | 186 |
| 4.4.1 Usage of a smart market | 191 |
| 4.4.2 The invisible hand of the getwork operator | 194 |
| 4.4.3 Trading parties on the electricity market in 2030 | 195 |
| 4.5 Usage of the blockchain in energy markets | 202 |
| 5 Organizational challenges with B2B blockchains | 209 |
| 5.1 Examples of the disruptive impact of the blockchain | 212 |
| 5.1.1 Example: Commodity exchange | 213 |
| 5.1.2 Example: Insurance without insurers | 216 |
| 5.2 When the elevator becomes a rollercoaster | 221 |
| 5.3 Blockchain governance | 224 |

| | | |
|----------|--------------------------------------------------------------|------------|
| 5.4 | Financing of a blockchain project | 229 |
| 6 | Blockchain in the energy sector – project examples | 233 |
| 6.1 | Enerchain | 236 |
| 6.2 | NEW 4.0 | 245 |
| 6.3 | Trading between prosumers and consumers | 250 |
| 6.3.1 | Stage 2016: “Ethical Trading” | 253 |
| 6.3.2 | Stage 2019: Balancing and settlement by the supplier | 254 |
| 6.3.3 | Stage 2021: ETIBLOGG | 259 |
| 6.4 | Gridchain | 261 |
| 6.5 | StromDAO | 267 |
| 6.6 | On the search for the theory of everything in energy trading | 271 |
| 7 | The WRMHL framework | 275 |
| 7.1 | Reference architecture for distributed applications | 275 |
| 7.2 | WRMHL | 278 |
| 7.3 | Synchronized distributed applications for consortia | 291 |
| 8 | Final thoughts | 297 |
| | Glossary | 303 |
| | Index | 309 |
| | Directory of figures | 310 |
| | Directory of tables | 311 |
| | Literature | 313 |
